

The 30 / 60 / 90 in OKR & STAR Format

Objectives and Key Results for execution · STAR narratives for the board and the room

What this adds. The charter's Section 4 already lays out a 30/60/90 plan as themes, tasks, and exit criteria, and Sections 5 and 6.3 define the metrics and KPIs. This addendum re-expresses that same plan in two canonical formats it did not yet carry: **OKRs** (an Objective with measurable Key Results, for planning and tracking) and **STAR narratives** (Situation – Task – Action – Result, for interviews, board updates, and case studies). No new claims are introduced — only new structure over the existing plan.

Format	What it is for	Read it as
OKR	Aligning and tracking execution. An Objective is qualitative and time-bound; Key Results are measurable outcomes (not tasks), scored 0.0–1.0, where ~0.7 is “good.”	The operating contract for each horizon.
STAR	Telling the story. Situation → Task → Action → Result — the structure interviewers, boards, and case studies expect.	The narrative behind each horizon.

HONESTY FLAG (CARRIED FROM THE SUITE)
The three horizon STARS are **forward-looking** — the plan rendered as narrative, not work already completed. The one retrospective STAR is the Modutecture pilot, which remains framed as a **validated demonstration, not a closed-and-scaled account**. Targets in the Key Results are the charter’s stated targets, pending verification where they originate from June-2026 source briefings.

A

The OKRs

The 30/60/90 as three Objectives, each with measurable Key Results

Three Objectives, one per horizon. Each Key Result is an outcome with a target drawn from the charter's success metrics (\$5) and agentic-transformation KPIs (\$6.3), so the OKRs and the existing metric tables stay one-to-one.

DAYS 0-30 • Land & Charter

Objective: *Establish FDE as a credible, chartered practice anchored by a live customer reference.*

#	Key Result (outcome)	Target	Source
KR 1.1	Modutecture engagement formalized as the practice's first reference; FDE Charter v1 signed.	Signed + referenceable	\$4, \$5
KR 1.2	Target accounts identified and scored for embedded-FDE fit.	3-5 accounts	\$4, \$5
KR 1.3	FDE Charter v1 published — definition, FDE ↔ GCC model, FDE Loop™ v1, metrics baselined.	Published	\$4
KR 1.4	Time-to-First-Value baseline established on the pilot.	Trajectory < 14 days	\$6.3

DAYS 31-60 • Codify & Prove

Objective: *Convert one success into a repeatable, staffed practice that demonstrably transfers beyond the pilot.*

#	Key Result (outcome)	Target	Source
KR 2.1	FDE Loop™ Cookbook + Landing Runbook published — teachable and branded.	Both published	\$4, \$5
KR 2.2	FDEs identified / onboarding, each paired with an offshore pod.	2-3 FDEs	\$4, \$5
KR 2.3	Second account landed using the FDE Loop™ (proves transfer).	1 account	\$4, \$5
KR 2.4	Client-Authored Spec Ratio on the pilot by end of Month 2.	> 60%	\$6.3
KR 2.5	Agentic PR Merge Rate, with Human Intervention Rate held flat.	> 90% merge; < 2 / 1k LOC	\$6.3

DAYS 61-90 • Productize & Scale

Objective: *Make FDE a named, sellable, scaling practice line with a pipeline, a dashboard, and a co-sell motion.*

#	Key Result (outcome)	Target	Source
KR 3.1	"StatusNeo FDE" live as a named practice on the site and in the sales motion.	Live	\$4, \$5
KR 3.2	FDE practice dashboard live — accounts landed, expansion revenue,	Reporting	\$4, \$5

#	Key Result (outcome)	Target	Source
	offshore-pull ratio, time-to-trust, NPS.		
KR 3.3	Reference accounts documented.	2-4 accounts	\$4, \$5
KR 3.4	Co-sell enablement delivered to all regions (West Coast, East Coast, EMEA, APAC).	All regions	\$4, \$5
KR 3.5	System Adoption Velocity, and Platform Contribution Rate (Spoke → Hub).	> 75%; ≥ 2 / pilot	\$6.3

HOW TO SCORE THESE

At each horizon close, score every Key Result 0 or 1 as function of target achieved. The horizon's score is the mean of its KR's. Trend: >1.7 is on track, not failure; a steady 1.0 means the targets were set too low. Binary KR's signed < published < best score 0 or 1. The Objective itself is not scored – only its Key Results.

B

The STAR Narratives

The same 30/60/90 as story — plus the Modutecture pilot that proves it

OKRs are how the practice is tracked; STAR is how it is told — in an interview, a board update, or a reference case. The three horizon narratives below are the plan as a forward-looking story; the fourth is the live proof the plan is grounded in.

Horizon STAR — Days 0–30: Land & Charter

Situation	StatusNeo has world-class frameworks (the OS Fabric™, the AuthenticAI™ Loop) and deep offshore scale, but no named onshore embedded-delivery motion — and the live Modutecture engagement, though the CTO is enthusiastic, is still informal.
Task	Convert that live momentum into a chartered practice with a referenceable pilot and a qualified target pipeline — in 30 days.
Action	Ran leadership immersion; audited active accounts for the 3–5 where an embedded FDE would have prevented churn or unlocked expansion; formalized Modutecture as the first reference; authored FDE Charter v1 (definition, FDE ↔ GCC model, FDE Loop™ v1, baselined metrics).
Result	Charter signed; Modutecture referenceable as the pilot; 3–5 targets identified and scored; Time-to-First-Value baseline set on a sub-14-day trajectory.

Horizon STAR — Days 31–60: Codify & Prove

Situation	One success (Modutecture) proves the embedded motion works, but it is a single data point — not yet repeatable, staffed, or shown to transfer.
Task	Make the motion repeatable and prove it transfers to a second account, with a staffed FDE cadre behind it.
Action	Published the FDE Loop™ Cookbook and the Landing Runbook; identified and began onboarding 2–3 FDEs, each paired with an offshore pod; applied the FDE Loop™ to land a second account; coached client engineers to author their own Gherkin specs.
Result	Methodology documented and teachable; 2–3 FDEs onboarding; second account landed; Client-Authored Spec Ratio > 60%, Agentic PR Merge Rate > 90%, Human Intervention Rate < 2 / 1k LOC.

Horizon STAR — Days 61–90: Productize & Scale

Situation	The motion is proven and repeatable across two accounts, but it is not yet a named, sellable practice line with its own pipeline.
Task	Institutionalize FDE as a productized, co-sold practice with a pipeline, a health dashboard, and regional enablement.
Action	Launched “StatusNeo FDE” on the site and in the sales motion; stood up the practice dashboard (accounts, expansion revenue, offshore-pull ratio, time-to-trust, NPS); enabled regional co-sell across West Coast, East Coast, EMEA, APAC; published the thought-leadership whitepaper extending the 2026 trilogy.
Result	Named practice live with a pipeline; dashboard reporting to the sponsor; 2–4 reference accounts; all

regions enabled; System Adoption Velocity > 75%; Platform Contribution Rate ≥ 2 / pilot.

Anchor STAR — the Modutecture pilot (the live proof)

The one retrospective narrative — the engagement that makes the whole charter credible. Framed honestly as a validated demonstration.

Situation	Modutecture — a StatusNeo customer in the healthcare-AEC space — had compelling but siloed prototypes and no production-grade path: validation “had no home,” and the regulated, air-gapped context raised the bar for any solution.
Task	Prove that an embedded FDE plus governed agentic AI could land a production-grade, customer-validated slice on the customer's own stack and de-risk the path to scale — without overclaiming.
Action	Diagnosed the load-bearing gap live and validated it with the customer; architected the contextual-construction twin approach; built the thinnest end-to-end vertical slice on their actual stack; enforced the deterministic correctness gate (model proposes, gate disposes); labeled every deliverable built / proven / next.
Result	A working, customer-validated demonstration on the customer's stack; the CTO was enthusiastic and invited a deeper engagement; the work became the pilot and reference case for the entire FDE practice — explicitly a validated demonstration, not a closed-and-scaled account.

THE ADDENDUM IN ONE LINE

Some 30,000-90 plan, two new lenses: OERs make each horizon measurable and trackable; STAP makes it tellable — with the Modularex pilot as the live proof under both.
